I am not sure why they are trying to block this service, but I think that have traffica nd weather on satellite is a benefit to all consumers that that own an XM radio because it allows them to travel anywhere in the country and still be able to get traffic and weather. Travelers to new states and areas are not going to be familiar with that state / towns radio stations, this would allow them to still get weather and traffic for the area they are in. By allowing traffic and weather to ber rmoved from the XM radio programming you are actually doing a dis-service to the sattelite radio provider and the actual consumer.
